the. CRACK 1C:Enterprise 8.1.12.101Q: Finding out whether URLs exist in a text file Python I'm trying to write a script that gets its work done by using tldr links and looks up the links in a text file called tldr.txt. The text file has a number of entries with urls in them like so a/b/c/d/i/j a/b/c/d/i/j/k and so on. I'm trying to use regular expressions to find out whether the files exist and make sure I only run through the text file once, and only once, otherwise it will return true no matter what.
